YARRA VASCULAR

# WOUND WON'T HEAL? SWELLING WON'T GO DOWN? KEEP GETTING CELLULITIS?

### DISCOVER WHAT'S REALLY CAUSING THE PROBLEM

Many people are treated for wounds and leg swelling without ever receiving a clear diagnosis. At Yarra Vascular's specialist wound and oedema clinic, we investigate the underlying causes of leg swelling, lymphoedema, venous disease, and non-healing wounds to develop a personalised treatment plan that targets the root cause.

**Heal Better. Swell Less. Prevent Recurrence.**

**Victoria's first structured, vascular multidisciplinary program dedicated to diagnosing and managing the causes of chronic lower-limb swelling and non-healing wounds.**

## INTRODUCING YARRA VASCULAR'S WOUND AND OEDEMA CLINIC

Focused Lower-Limb Oedema and Wound Program

**Over twelve weeks, your three-visit program includes:**

**1**

**Comprehensive Assessment**

Specialist review, arterial ultrasound, toe pressures and personalised treatment plan.

**2**

**Review & Optimisation**

Review healing progress, scan results, venous ultrasound and refine management.

**3**

**Prevention & Maintenance**

Reduce recurrence and support long-term vascular health.

YARRA VASCULAR

## The Wound is Often the Tip of the Iceberg

Chronic wounds and leg swelling are often signs of underlying circulatory, venous, lymphatic, or medical conditions. Our role is to identify the cause and treat the factors preventing healing.

## Why Patients Choose Us

**We Find Answers**

In most cases, leg swelling is of mixed etiology - systemic and local factors are in play. The Yarra Vascular Wound and Oedema Clinic has brought together a multidisciplinary team of vascular medicine specialists, vascular surgeons, vascular sonographers and nurses to provide patients with a comprehensive assessment of factors that contribute to leg swelling and chronic wounds, providing you with a diagnosis and management plan.

**We Bring Everything Together**

Specialist vascular assessment, vascular ultrasound, oedema management, and treatment planning within one coordinated program.

**We Help Prevent it from Returning**

Our goal is not simply to heal today's wound, but to reduce future swelling, infection, ulcer recurrence and hospital admissions. Although wound healing can not ever be guaranteed, we give it the best chance of doing so, which depends on patient compliance with treatment and instructions.
